

AI Linc, role by role.

AI Linc is a multi-tenant learning platform. One codebase serves every client organisation, and each one gets its own subdomain, branding and enabled feature set. Signing in resolves to a role, and the role decides which workspace renders. Inside a workspace, each module is gated on a per-tenant feature flag, so two clients running the same release can legitimately see two different products.

6	45	142	38	48
roles, from learner to platform owner	modules across the four workspaces	pages in the learner and admin app	backend services behind them	client organisations on the platform

Multi-tenant by construction

Every record is client-scoped. A tenant sees its own learners, content and results, never another's.

Modules are feature flags

Each nav item declares a feature name. Turn it off for a tenant and the module disappears from that tenant.

Adaptive, not just hosted

Courses, quizzes, coding and video adapt to the learner; an AI tutor and mock interviews sit alongside.

One app, two modes

Admins do not get a separate login. They toggle Admin Mode and the whole sidebar changes.

Four workspaces, six roles

A user profile carries a role and a client. The role selects the workspace; the client scopes every query behind it. Three roles share the learner and admin app, and the platform owner works in a separate cross-tenant console.

01

Student

The learner. Adaptive courses, roadmaps, an AI tutor, assessments, mock interviews, a resume builder, jobs, live sessions and a community.

/dashboard · 3 modules · 13 pages

02

Instructor

Teaches inside one tenant: assigned batches, course content, their own students, a gradebook, live sessions and cohort analytics.

/instructor · 9 pages

03

Admin

Runs a client organisation: students and cohorts, the course builder, assessments and projects, certificates, jobs, emails, tickets, payments and branding.

/admin · 5 modules · 23 pages

04

Super Admin

Runs the platform across every tenant: clients and provisioning requests, the shared course and question libraries, AI token spend and payments.

Separate console · 13 pages

05

Course Manager

A scoped admin. Reaches the course catalogue and content tools, but is filtered to what it has been assigned rather than the whole tenant.

Scoped admin role

06

Recruiter

Exists for the hiring side of the platform: job descriptions, applications and the candidate pipeline, without the rest of the admin surface.

Jobs surface

One platform, many tenants

Every client organisation is a tenant with its own subdomain, logo, palette and enabled modules. The screenshots in this document come from the demo tenant at `demo.ailinc.com` ; the same release running for another client looks different because its feature set and branding differ, not because it is a different build.

PER TENANT

What a tenant owns

- Its own subdomain and site, with logo, colours and wordmark.
- Its own learners, cohorts, instructors and admins. Records are client-scoped.
- Its own enabled modules, set as feature flags.
- Its own content: courses built in the tenant, plus anything pulled from the shared library.

Branding is per tenant, set from inside the tenant's own admin console.

FEATURE FLAGS

Modules switch on per client

Every navigation item declares the feature it needs. If the tenant does not have that feature, the item is not rendered at all, and the pages behind it are unreachable. This is why a module list is only ever true for one tenant at a time.

- Student modules carry flags such as `adaptive_quiz` , `roadmaps` , `ai_voice_tutor` , `jobs_v2` and `community_forum` .
- Admin modules carry their own, such as `admin_cohorts` , `admin_assessment` and `admin_certificates` .
- The demo tenant has all 13 student modules on; it does not have every admin module on.

The platform owner sees every tenant, its site, its learner count and whether it is active.

WORKSPACE 01 · STUDENT

The learner

Thirteen modules in three groups. The dashboard is an AI briefing rather than a wall of widgets: what to do this week, what to do today, and where the learner stands against their cohort. Everything else hangs off that.

HOME

Dashboard

Five headline numbers, a readiness breakdown, and three concrete actions for today.

Total points

The unified score, earned across every activity type.

Day streak

Current run and personal best, which the points system decays.

Cohort rank

Position inside the learner's own cohort, not the whole tenant.

Momentum

A 0–100 measure of whether the learner is speeding up or drifting.

On-time rate

Whether deadlines are being met, with penalties shown.

Course readiness

Split into curriculum coverage and clutch performance.

Today's goal

Three actions: complete a lesson, 15 minutes practice, take a quiz.

Profile completion

A meter that gates the Career modules until it is finished.

MODULE 01

Learn

Adaptive courses, roadmaps, an AI tutor, assessments, certificates and the scorecard. Seven of the thirteen student modules sit here.

ADAPTIVE COURSES

Courses that respond to the learner

A course holds modules and submodules; each submodule mixes articles, videos, quizzes and coding problems. The journey board is the learner's path through it, and difficulty moves with performance rather than staying fixed.

- Journey board**

The visual path through one course, step by step, with what unlocks next.
- Articles with check-ins**

Reading is confirmed by a check-in question, not by a scroll event.
- Video with no-skip bonus**

Watching earns points, with a bonus for not skipping.
- Adaptive quizzes**

Question difficulty follows measured mastery.
- Coding problems**

Run and submit against tests, in the browser.
- Calibration**

An opening assessment that places the learner before the course adapts.
- Catalogue**

Browse and self-enrol where the tenant allows it.
- Progress per course**

Percentage complete and steps done, on every card.

Enrolled courses and progress

The catalogue

A course and its structure

The journey board

ROADMAPS

The layer above courses

A roadmap is how a learner chooses what to learn across several courses. They come in three kinds, and the third is the one most learners actually search for.

- Role based**

Data Engineer, Frontend, Backend, Full Stack, Data Analyst, Data Analytics and AI Engineer.
- Skill based**

Java, SQL for Data Analysis, DSA, Business Intelligence, Web Performance and Accessibility, C and C++.
- Company based**

Routes aimed at a named employer: IBM, Accenture, LTIMindtree, Capgemini, Wipro, Cognizant, TCS, Tech Mahindra and Infosys.
- Node binding**

A roadmap step binds an existing course submodule rather than copying it, so content stays single-source.
- Build your own**

A learner can ask for a roadmap in plain English; it is assembled from the verified question bank rather than generated by AI.

AI TUTOR

A tutor that knows what you are studying

The tutor is not a blank chat box. It opens on where the learner left off, suggests topics drawn from their current course, and can be spoken to rather than typed at.

Pick up where you left off

Resumes the previous session and its covered topics.

Because of what you're studying

Suggestions pulled from the learner's live course position.

Browse by track

Topic libraries such as DSA and Programming Fundamentals.

Confidence setting

New to this, some idea, or pretty confident — the tutor pitches to it.

Session length

A 10 or 15 minute session, chosen before starting.

Start talking

Live voice, not just text.

Coverage tracking

Each topic shows how much of it has been covered, as a fraction.

Session recap

A written recap after the session ends.

CERTIFICATES AND THE SCORECARD

Seven rungs, and a report that explains them

Certificates are earned against a points ladder rather than issued per course, and the scorecard is the full report behind the dashboard’s summary.

1,500

Learning Foundations

3,000

Learning Achievement

5,000

Learning Excellence

10,000

Skill Readiness

25,000

Skill Proficiency

50,000

Skill Excellence

100,000

Skill Mastery

Verified credential

Each certificate has a public verification link.

Twelve scorecard sections

Activity, consumption, accuracy trends, skills, weak areas, assessments, interviews, consistency, comparatives, trophies, actions, recommendations.

You vs batch vs top 10%

Comparative insight rather than a bare number.

Weak areas and alerts

Named topics needing attention, not just a low score.

Points by activity

Video, article check-in, quiz, coding, checkpoint, final, calibration and AI interview each carry their own weight.

Time decay and weekly windows

Points fade, so a streak reflects current effort.

Difficulty multiplier

Harder items are worth more.

Exportable

The scorecard renders to PDF.

The seven-rung ladder

The twelve-section report

How every point is earned

MODULE 02

Career

Mock interviews, a resume that scores itself, and jobs. Gated behind profile completion, which is why the padlocks appear on a new account.

MOCK INTERVIEWS

Two interview products, not one

A realtime voice interview for practice on any topic, and a scheduled interview tied to a course. Both are scored and both keep a history.

Quick start Pick a topic and difficulty; questions are generated immediately.	Kind of interview Mixed, technical, behavioural or system design.
Difficulty Easy, medium or hard.	Length 5, 10 or 15 minutes.
Scheduled interviews Booked ahead and tied to a course.	Device check Camera and microphone verified before the room opens.
Scored result An average score, a highest score, and a per-attempt result page.	History Total, completed and scheduled counts, with previous attempts kept.

Realtime practice: kind, difficulty and length

Quick start, scheduled and previous

RESUME

A resume that scores itself as you write

Six structured sections, a live ATS score that moves while editing, AI tailoring, and a dozen templates that export to PDF in one click.

Live ATS score

Recalculates as the resume changes, with the score shown in the header.

Fixable suggestions

Each suggestion carries the points it would add and an apply button.

Six sections

Basic information, work experience, education, skills, projects and certifications.

AI tailoring

Rewrites against a target role.

Twelve templates

Modern, Classic, Minimal, Executive, Creative, Technical, Western, LuxSleek, Two Column, Accent Bar, Right Sidebar and Bubble.

Live preview

The sheet updates beside the editor.

One-click PDF

Export without leaving the page.

JOBS

Roles the learner is actually eligible for

Browse, applied, saved

Three tabs covering the whole application lifecycle.

Eligibility

Each role states whether the learner meets it yet, and what is missing.

Profile gate

Applying requires the profile to be complete.

Eight filters

Job type, location, experience, skills, employment type, posted, closing and salary.

Apply in-app

Applications are made and tracked without leaving the platform.

MODULE 03

Engage

Live classes, a forum with its own economy, support, and the points system that ties the whole workspace together.

LIVE SESSIONS AND COMMUNITY

The parts that keep people coming back

- Attendance tracked**
Sessions attended, attendance rate and live hours, per learner.
- Calendar view**
A month calendar of sessions, filterable by batch and course.
- Upcoming, recordings, history**
Three views over the same schedule.
- Sync to calendar**
Push sessions to the learner's own calendar.
- Five post types**
Question, poll, resource, humorous and discussion.
- Bounties**
Points attached to unanswered questions.
- Verified answers**
Faculty-marked answers, so the right one is visible at a glance.
- Following, my posts, saved**
Personal views over the forum.

Calendar, attendance and recordings

Post types and filters

Community standing

Bounties on open questions

The rest of Engage

- Ticket lifecycle**

Open, in progress, resolved and reopened, visible to the learner.
- Categorised tickets**

Each ticket carries a category such as video help.
- Streaks and leaderboard**

Standing across the cohort, with streak history.
- Profile**

The record that unlocks Career, with a public preview.
- Purchases**

What the learner has bought, where the tenant sells.

Student 3 modules	Instructor 1 module	Admin 5 modules	Super Admin 1 module
Learn7	Teaching9	People3	Workspace13
Career4		Content3	
Engage6		Assessments6	
		Engagement6	
		Communications8	

The modules behind each workspace, with the number of pages in each. Student and Admin are grouped into named sections in the sidebar; Instructor and Super Admin present a single flat list.

An admin signs in to the same application as a learner and presses **Admin Mode**; the sidebar swaps from Learn / Career / Engage to five admin modules and a badge appears in the top bar. There is no second account and no second URL.

- 5 MODULES
- People
- Content
- Assessments
- Engagement
- Communications

HOME

Dashboard

It opens on the number most platforms bury: how many enrolled learners did anything at all.

Students active

Active learners over the window, against the enrolled total.

Activities completed

Volume of real learning events, with the change on the previous period.

Median study time

Per active day, so one heavy user cannot flatter it.

Tickets waiting

Unanswered past SLA.

Six windows

7, 30, 60, 90 days, 6 months or 12 months.

Activity trend

Activities completed against students active, plotted together.

Busiest and quietest day

When the tenant actually studies.

Course filter and export

Narrow to one adaptive course, then export the view.

MODULE 01

People

Students, instructors and cohorts — the three registers a tenant runs on.

DIRECTORIES

Who is enrolled, who teaches, who is grouped with whom

The student directory is built around operational segments rather than a flat list, so the people who need attention are one click away.

Six risk segments

At risk, inactive 30 days, low completion, high performers, never logged in, never active.

Per-student view

Enrolment, job history, activity and course access on one record.

Instructor approval

Applications arrive pending, with a CV, and are approved or rejected.

Course mapping

Which cohort gets which course, as its own view.

Filters

By enrolled course, status, saved resume, and free-text name or email.

Add student

Single enrolment without an import.

Cohorts

All, active, scheduled, drafts and completed, with members and assignments.

MODULE 02

Content

Building the courses and issuing the credentials.

COURSE BUILDER

Three ways to build a course

The builder leads with an AI composer that takes a plain-English brief, but neither of the other two routes is hidden behind it.

AI course composer

A brief such as “8-week Python for absolute beginners, article + quiz per topic” becomes a course.

Build manually

No AI and no waiting, for teams that would rather author it.

From a CSV plan

Supply the outline and let the builder fill it.

Draft and publish

Courses stay drafts until published, and can be unpublished.

Content counts

Weeks, topics, articles, quizzes and coding problems shown per course.

Calibration and interview

Per-course calibration and mock interview configuration.

Certificate templates

Ten designs, from Brand Classic to Grand Gold.

The points ladder

Seven rungs configured here, with criteria per rung.

AI composer, manual and CSV routes

Templates, ladder, assignments and issued

MODULE 03

Assessments

Papers, take-home projects and the scorecard that performance rolls up into.

AUTHORING AND MARKING

Company-shaped papers, and projects that need a human

AI assessment composer
A brief such as “45–min proctored cybersecurity screening, 10 MCQ medium + 2 hard coding”.

Prep for a company
Blueprints aimed at named employers: TCS, Infosys, Wipro, Capgemini, Accenture, Cognizant.

Product or service shaped
Blueprints split by the kind of employer.

Five states
All, active, scheduled, drafts and closed.

Proctored, AI-authored, paid
Flags carried on the paper itself.

Live monitor
Watch an assessment while it runs.

Project library
Take-home projects: auto-graded or rubric-marked, with a verification queue.

Scorecard configuration
Twelve sections, with skills and badges defined per tenant.

Composer, company blueprints and states

Auto-graded and rubric-marked projects

Scorecard across 188 students

Skills performance maps to

Badges

MODULE 04

Engagement

Live teaching, interviews and the jobs a tenant publishes.

Classes, interview analytics and a jobs desk

Zoom and Google Meet

Both integrated, with a setup guide and presets.

List and calendar

Two views, filterable by batch and course.

Session states

All, upcoming, live now and past.

Interview analytics

Total interviews, unique students, completion rate and average score.

Four analytic cuts

Overview, interviews, students and topics, over 7 to 90 days.

Interview templates

Published interviews configured once and reused.

Jobs desk

Total, active, draft and closing-this-week, with applicant counts.

Scraped queue

Externally sourced roles reviewed before publishing.

COMMUNICATIONS

Reaching learners, answering them, and the tenant’s own identity.

OUTBOUND AND INBOUND

Email, notifications, tickets and branding

Email jobs

Campaigns tracked as jobs, with assessment emails separated out.

Notification targeting

Individually, by course, by batch, or everyone in the client.

Deep-linked notifications

Point at dashboard, courses,jobs, assessments, community or profile.

Ticket queue

Open, in progress, resolved and all, with a reopened-only filter.

Assignees

A per-tenant list of who support tickets go to.

Branding

App logo, email and certificate logo, favicon, display name and login page text.

Payment account

Razorpay connected per tenant, with a setup guide.

Six admin navigation items have no page on `main` .

Workshop registration, assessment results, webinar management, e-book, payment and referral each carry a feature flag in the navigation model, but no route exists for them in this build: opening one returns a 404. The demo tenant has those flags off, so they do not appear in its sidebar. They are listed here for completeness and are deliberately not illustrated.

WORKSPACE 03 · INSTRUCTOR

Teaching inside a tenant

Deliberately narrower than the admin workspace. An instructor is staffed onto specific cohorts and courses, and every page is scoped to that assignment: their batches, their students, their gradebook. Two of the nine pages reach into the shared assessment tools rather than duplicating them.

9 PAGES **Scoped to assignment**

HOME

A teaching briefing

The dashboard names the single biggest lever for the week rather than listing everything at once: which cohort is slipping, and how many learners need a nudge.

Teaching briefing
Opens with the cohort most worth attention and why.

Do this week / do today
Two concrete actions rather than a metric wall.

Four headline counts
Students, cohorts, average progress and how many are at risk.

Cohort readiness
Engagement, progress and completion, each rated.

Cohort health
Per-cohort progress with a needs-work flag and a full report.

Today's focus
A checklist: sessions, grading, and at-risk check-ins.

BATCHES, CONTENT AND STUDENTS

Only what they were assigned

Scope is the point. A direct course assignment grants the whole roster; reaching a course only through a cohort shows that cohort’s members and nobody else’s.

My batches

Each cohort with its student count, progress, average score and at-risk count.

Course content

The courses they teach, with a builder, roster and content view.

On track and watch

Segments that separate the healthy from the slipping.

Export CSV

The roster leaves as a file.

Student report

A per-cohort report, exportable.

Student reports

192 students across their four cohorts, filtered by cohort.

Message cohort

Broadcast to a batch, where their staffing permits it.

Gradebook

Submissions for their batches, with questions and answer keys.

SHARED TOOLS AND TEACHING

Assessments, projects, classes and analytics

The assessment and project tools are the same ones the admin uses, entered with an instructor’s scope: they may open and mark the papers mapped to their cohorts, but rewriting a paper is a separate permission an admin grants.

Assessments

The shared authoring tool, scoped to their mapped papers.

Project library

Shared take-home projects, auto-graded or rubric-marked.

Live sessions

Schedule and run classes, with states for live, scheduled, ended and cancelled.

Analytics

Average progress, completion, at-risk and a progress distribution across their cohorts.

Edit rights are separate

Being handed a batch does not grant the right to rewrite its paper.

WORKSPACE 04 · SUPER ADMIN

Running the platform

A separate application from the tenant app, and the only place that sees across tenants. A tenant admin can never reach it. Thirteen pages covering provisioning, the shared content libraries, AI spend and money.

CROSS-TENANT

A pulse on everything

Platform totals

Learners, clients, courses and how many clients are actually live.

Recent courses

The shared catalogue, newest first.

Live workspace

Figures update rather than being a nightly snapshot.

TENANTS AND PROVISIONING

Creating and running client organisations

Client directory

Every tenant with its site, learner count, contact and joined date.

Active and last-active

Filter by status, and by how recently a tenant did anything.

Per-client workspace

Open a client to configure its workspace and branding.

Activate and deactivate

A switch per client, with delete behind it.

Tenant requests

Incoming provisioning requests for new client organisations.

Export

The directory exports.

Every client organisation

Provisioning requests

SHARED LIBRARIES

Content curated once, used by many tenants

Course library

The classic course catalogue held centrally.

Adaptive courses

Adaptive courses curated at platform level.

Course requests

Tenants asking for content to be built or shared down.

Question bank

The shared question pool behind quizzes and assessments.

Vimeo library

Video assets, uploaded and managed centrally.

Chatbots

Assistant configuration per deployment.

The shared course library

Adaptive courses centrally

Requests from tenants

The shared question bank

Video library

Chatbot configuration

SPEND, MONEY AND ESCALATION

What the platform costs and earns

AI token usage

Spend metered per client, which is how AI cost is attributed.

Payments

Transactions across tenants.

Escalated tickets

Support that a tenant could not resolve.

Platform settings

Configuration that applies to every tenant.

AI spend per client

Payments across tenants

Escalated support

Platform settings

NOTHING LEFT OUT

Every module, by role

The navigation as each role resolves it. These are the modules a tenant can switch on; the learner and admin app holds 142 page routes in all, including the detail and player pages that are reached from these rather than listed in the sidebar.

Student13 pages	Instructor9 pages	Admin23 pages	Super Admin13 pages

HOW TO READ THIS

What these screens are, and are not

Everything here is the live product, not a mockup. That makes it accurate and also means a few things are worth stating plainly.

- **One tenant's view.** Every learner and admin screenshot comes from the demo tenant. Another client with a different feature set will show a different set of modules in the same release.
- **Demo data.** The demo tenant is seeded with sample learners and activity, so the numbers illustrate the shape of the product rather than a real customer's performance.
- **Personal data is blurred.** Email addresses and phone numbers are masked in every screenshot. The demo tenant carries a few genuine sign-ups alongside the seeded ones.

- **The super-admin screens are real platform data.** Client names, counts and spend are live. Treat that section as internal unless those figures are cleared for the audience.
- **The instructor account was seeded for this document.** The demo tenant had no instructor, so one was created and staffed onto four real cohorts and the Advanced Python course. Its screens therefore show genuine scoped data — 192 students across four batches — rather than empty states.
- **Captured, not curated.** Pages are shown as they loaded, including empty states where the demo tenant has no data for that module. An empty queue is information too.

See it running

The demo tenant is the fastest way to feel how the role, the tenant and the feature flags combine. Sign in as a learner, then as an admin, and press Admin Mode.

- /dashboard
- /admin/dashboard
- /instructor
- Super Admin console

Open the demo tenant ↗
